

## Have you ever taken the time to really compare?

### **Bottled Water Cooler**

Has great tasting drinking water.

### **Bottleless Water Coolers**

Has great tasting drinking water - *AND*

1. No bottle deposits
2. No bottles to store
3. No lifting of 45 pounds
4. No spilling while filling
5. Never run out of drinking water
6. *No personal hygiene issues\**
7. No personal injury issues
8. 5 year price guarantee
9. Usually a substantial savings

*\*People at the bottled water packaging plant, the warehouse guys at the bottled water company, the delivery drivers, personal from your office will all handle the bottle, most times by the neck, when they move or carry the bottle. That same bottle neck is submerged inside the cooler reservoir and is actually sitting in the water and therefore should develop concerns regarding bacteria being introduced into the water.*

Please take the time to try and think of any benefits that your current bottled water has over bottle-less water technology.....If you are like the rest of our customer's, you probably will not be able to think of any either!

Thanks for considering us,
