Intec Electronic Valve

FOR USE ON FILTRATION AND ION EXCHANGE SYSTEMS

In response to market demand, Intec now offers electronic push button water softening and filter control valves. The valves are designed with the customer in mind, and have many features that were a direct result of feedback from the market place. The valves are manufactured from composite plastics and are designed to provide high flow rates over a wide range of applications, providing a great deal of flexibility in system design. The valve comes standard with bypass plumbing for easier installation.

- > Automatic self-cleaning
- > 16 gpm max flow rate
- > 13 gpm required for backwash cycle

Intec America Corporation

▶ HISTORY

Our company, which was organized in August of 1976, entered the water treatment business by manufacturing copper ionization units for swimming pools. In 1981, Intec expanded its product line by incorporating this technology for disinfecting water for residential, commercial, and livestock production. Today, our company is nationwide and sells a variety of water treatment technologies including, but not limited to, filtration, ion exchange, reverse osmosis, ozonation, and U/V radiation.
